## AUTOMATION & DATA ENGINEER — FULL-STACK DATA PLATFORMS

silwalprajjwal@gmail.com | +1 (318) 557-8090 | [linkedin.com/in/prajjwal-silwal](https://www.linkedin.com/in/prajjwal-silwal) | [prajjwalsilwal.github.io](https://prajjwalsilwal.github.io)

### SUMMARY

---

Full-stack data and automation engineer who designs and ships production data platforms end to end — ingestion, transformation, warehousing, APIs, and the dashboards teams run their day on. Built and solely operate the live system a 200+ unit property business depends on daily. Fluent across Python, PostgreSQL, FastAPI, and React, with a foundation in mathematics and statistics.

### TECHNICAL SKILLS

---

**Languages & Data:** Python (pandas, NumPy), SQL (CTEs, window functions, ETL/ELT), PostgreSQL, DAX

**Backend & Pipelines:** FastAPI, REST API design, snapshot data warehousing, connection pooling, TTL caching, Playwright browser automation

**Frontend & Visualization:** React, Vite, Tailwind CSS, Power BI (star/snowflake modeling), dashboard UI/UX design

**AI & Operations:** LLM integration (OpenRouter), local LLM deployment (Open WebUI), scheduled-job orchestration (Windows Task Scheduler, PowerShell), Git

### PROFESSIONAL EXPERIENCE

---

#### Automation & Data Engineer | Braud Property Management — Monroe, LA

Jan 2026 – Present

- ▶ Designed and shipped an end-to-end data platform (~15,600 lines of Python, ~7,300 lines of React) that a 200+ unit property portfolio operates on daily — ingestion to warehouse to API to dashboard, built and maintained solo.
- ▶ Built the ingestion layer: 12 headless Playwright extractors and 18 Python cleaners that pull, normalize, and deduplicate ~18 daily operational reports into typed, analysis-ready facts.
- ▶ Modeled an append-only snapshot warehouse in PostgreSQL keyed by snapshot date, giving the business auditable time-travel across its full operational history.
- ▶ Developed a FastAPI serving layer (15 routers, connection pooling, TTL caching) powering a React/Vite/Tailwind operations dashboard: prioritized actions feed, tenant risk scoring, a delinquency/eviction rules engine, leasing pipeline, and cash-basis financials.
- ▶ Automated operations with four scheduled jobs (daily and hourly ingest plus a minute-level SMS worker) using event-driven Playwright waits, and integrated an LLM layer (OpenRouter) for privacy-aware applicant screening and action suggestions.

#### Technical Analyst & Support Lead | Contract — Monroe, LA

Jan 2022 – Dec 2025

- ▶ Delivered end-to-end IT support and hardware lifecycle management for 20+ clients, cutting average downtime ~15% through OS deployment and cross-platform virtualization (UTM, Parallels).
- ▶ Built Python automation to extract, clean, and compile 500+ business records, supporting client outreach and market analysis.
- ▶ Created Python and SQL diagnostic workflows tracking performance across 30+ endpoints, surfaced in custom dashboards that cut troubleshooting time ~20%.
- ▶ Maintained a 95% first-time fix rate on hardware repairs and upgrades, extending average device lifespans by 1–2 years.

### EDUCATION

---

#### University of Louisiana at Monroe

Jan 2019 – May 2023

100+ credit hours toward B.S. in Mathematics & Computer Science  
Coursework: Statistics, Calculus, Linear Algebra, Data Modeling, Probability

### CERTIFICATIONS

---

Google Data Analytics Certificate | Google IT Support Certificate
